

# Greenford Christian Church

Greenford, Ohio  
July 5, 2013

This is a testimony of the Communion Team and what we have used to fill the Communion cups since the early 90's.

We began by using a measuring cup and at times even a turkey baster to fill the individual cups for a church of around 200. As the church grew, we purchased a cup with a spring-loaded release in the center, making filling a bit quicker since the cup held more juice at one time. The church continued to grow and with that came the need to become even more efficient on the time it took to prepare the individual servings. In the late 2000's, we purchased a "Quick-R-Filler" cup filling product that had a dispense handle attached to a hose with a screw-on bottle cap. This cap replaced the cap on a juice bottle and when inverted the bottle is nestled into a special holder so gravity is used to fill cups continuously, thus saving valuable time with less effort. As with any product, changes come and in 2013 the juice we purchase changed the size of their cap, thus making our filling system obsolete. We contacted R&D Services (the manufacturer of the Quick-R-Filler) and were told, with regrets, this was the only size cap which came with the system. The next day we received a call from the company saying they really were unhappy leaving us stranded like that and offered to make a few special caps and attachments to fit the new size bottle openings. We, of course, were thrilled with this offer and accepted.

This testimony is really for the conscientious effort of this company to please its customer. We were as impressed with this genuine concern as we were with the willingness to help us with our dilemma. It is rare in today's world to find a company with that kind of dedication to others and we wish to extend a heartfelt THANK YOU!

As our church grows past 1500+, we will continue to seek products from you to fit our needs.

We are in God's service
